A New Approach to Feedback for Robust Signaling Gradients. ... To initiate our new approach to feedback, we consider in this first effort the effect of a negative feedback stimulated by a higher than normal signaling ligand concentration to be simply a reduction of the ligand synthesis rate V_L .

A New Approach to Feedback for Robust Signaling Gradients

A proposal for the more rigorous, quantitative treatment of robustness is developed. It is suggested that most failures result from errors and that the risks to health and safety from failures result largely from insufficient robustness. The risks from failure may not be greatly changed by changes in safety factor.

A new approach of control design of internal model controller is proposed in this book. The proposed design method focuses on modifying the old general structure of IMC and develops a new model structure while saving the same general concept of using the invertible version of the system in the controller design.

A New Approach for Soft Synchronization of Microgrid Using Robust Control Theory Abstract: Microgrid is the main part of future electrical power systems, called "smart grids". In this context, the synchronization of a microgrid with utility or other microgrids will be a crucial and commonplace task during power system operation.

In this paper, robust design and planning of a multi-echelon, multi-product, multi-period supply chain network considering process uncertainty is addressed. At first, a new robust optimization approach is developed which is capable to take into account two possibly disjoint uncertainty sets for each uncertain parameter.

A new approach is given for the design of adaptive robust control in the frequency domain. Starting with an initial model of a stable plant and a robust stabilizing controller, the new (windsurfer) approach allows the bandwidth of the closed-loop system to be increased progressively through an iterative control-relevant system identification and control design procedure. The method deals ...

New approach to robust futexes ¶ At the heart of this new approach there is a per-thread private list of robust locks that userspace is holding (maintained by glibc) - which userspace list is registered with the kernel via a new syscall [this registration happens at most once per thread lifetime].
