Identifying Adaptations In

in Birds Lab

Background Birds have many adaptations for flight. Hollow bones make birds light. Their feather-covered bodies are streamlined, which reduces air resistance. Strong flight muscles move the wings, and the wings provide aerodynamic lift. Birds are also adapted to their food source and to their environment.

Activity: Bird Beak Adaptation Lab

These changes are called adaptations. An adaptation is an inherited characteristic. It is not developed over an animal's lifetime but over generations. During this lab, students will explore how different tools may represent how the beaks of birds have
