Plants.com: Indoor Potted Plants Delivered Right to Your Door

Cold-hardy plants can be planted indoors in late winter or early spring. Plants that thrive in heat need a later seeding date (mid- or late spring), so the weather is warm when the plants are ready to go outside. Plants usually take three to six weeks to grow from a seed to a healthy plant ready to be moved outdoors, but some take up to fifteen.

Common Misconceptions about Plants — Polar Plants — Beyond ...

Plants have also adapted to the long winters and short, intense polar summers. Many Arctic species can grow under a layer of snow, and virtually all polar plants are able to photosynthesize in extremely cold temperatures. During the short polar summer, plants use the long hours of sunlight to quickly develop and produce flowers and seeds.

Plants of the Arctic and Antarctic — Polar Plants — Beyond ...

Most all plants use water to carry moisture and nutrients back and forth between the roots and leaves. Water, as well as nutrients, is normally taken up through the roots from the soil. This is why it's important to water plants when the soil becomes dry. Fertilizer also provides plants with nutrients and is usually given to plants when watering.

How Do Plants Grow - Things Plants Need To Grow

The Private Life of Plants is a BBC nature documentary series written and presented by David Attenborough, first shown in the United Kingdom from 11 January 1995..
