## **Project management for power plant construction in Korea**

The boiler enclosure needs to be properly thought out so that necessary work like welding and inspection can be done without additional temporary structures. It also pays to think about how to replace heating surfaces and wall tubes (Advances in power station construction, 1986). It is necessary to think about the safety of people working inside a boiler; e.g., how to make necessary scaffolding and how to minimize exposure to falling objects.
